History of human development illustrates clear image of impotence of food in our life. Food has played important part in religion, in science, in technology, in medicine; not very pleasant to hear but also in wars, in class distinction and relations between peoples. In everyday’s life we have a “dialogue” with food (we have to eat, we have to buy food, we have to produce food, etc). This “dialogue” has its benefits and its negative sides, that might be shown tough malnutrition on one side and overnutrition on other side, stable economy on one side and unstable economy on other side, ect. There is always involved this balance catching issue. From this point of view, the scientists and experts from field of food area initiated the European declaration on Food, Technology and Nutrition (EFTN Declaration). EFTN Declaration’s aim is pointed at collaborative work among scientist and experts who are dealing with challenging questions about food and nutrition in the Europe taking into account cooperative activities with the rest of the world. The inauguration event of signing ceremony was held on 7 November, 2008 in City Hall in Ljubljana, Slovenia.

Key words: food, human life, EFTN Declaration, inauguration
